NETSOL TECHNOLOGIES

Cybersecurity Training Program

Research on Cybersecurity Domains

Assignment 1

Submitted By:	Muhammad Usman Saleem
Role:	NETSOL Cyber Security Trainee
Assignment:	Research on Cybersecurity Domains
Date:	March 2026

Table of Contents

1. Penetration Testing
2. Digital Forensics
3. SOC Analyst
4. Malware Analysis
5. Threat Intelligence
6. Cloud Security
7. Network Security
8. Application Security
9. Governance, Risk & Compliance (GRC)
10. Red Team / Blue Team Operations
11. References

1. Penetration Testing

1. Definition and Overview

Penetration Testing (Pen Testing) is an authorized simulated cyberattack on a computer system, network, or web application to evaluate its security posture. The goal is to identify vulnerabilities before malicious actors can exploit them. Pen testers use the same tools and techniques as attackers but with explicit permission from the target organization.

2. Key Responsibilities

- Conduct reconnaissance and information gathering on target systems
- Perform vulnerability scanning and manual exploitation
- Test web applications, networks, and APIs for weaknesses
- Write detailed penetration testing reports with findings and remediation advice
- Collaborate with development and security teams to fix vulnerabilities
- Perform post-exploitation to determine the full impact of a breach

3. Required Technical Skills

- Proficiency in Linux/Windows operating systems
- Knowledge of networking protocols (TCP/IP, HTTP, DNS, FTP)
- Scripting in Python, Bash, or PowerShell
- Expertise in tools like Metasploit, Burp Suite, Nmap
- Understanding of OWASP Top 10 vulnerabilities
- Familiarity with Active Directory attacks

4. Required Soft Skills

- Analytical and critical thinking
- Strong written and verbal communication for reports
- Attention to detail
- Ethical mindset and professionalism
- Problem-solving under pressure

5. Tools Used

Metasploit Framework, Burp Suite, Nmap / Zenmap, Wireshark, Kali Linux, Nikto, SQLmap, Hydra, John the Ripper, Cobalt Strike

6. Certifications Related to the Domain

- OSCP – Offensive Security Certified Professional (Offensive Security)
- CEH – Certified Ethical Hacker (EC-Council)
- CompTIA PenTest+

- GPEN – GIAC Penetration Tester
- eJPT – eLearnSecurity Junior Penetration Tester

7. Career Path & Growth Opportunities

Entry-level roles include Junior Penetration Tester or Security Analyst. Mid-level includes Senior Penetration Tester or Red Team Specialist. Advanced roles include Red Team Lead, Security Consultant, or CISO. Freelancers can also participate in Bug Bounty programs on platforms like HackerOne and Bugcrowd.

2. Digital Forensics

1. Definition and Overview

Digital Forensics is the process of uncovering and interpreting electronic data for use in legal investigations or incident response. It involves the collection, preservation, analysis, and presentation of digital evidence from computers, mobile devices, networks, and cloud environments. The goal is to maintain the integrity of evidence and reconstruct the sequence of events in a cyberattack or crime.

2. Key Responsibilities

- Acquire forensic images of storage media without altering original data
- Analyze file systems, logs, and memory dumps
- Recover deleted or encrypted files
- Investigate email fraud, data theft, insider threats, and cybercrimes
- Maintain chain of custody for evidence
- Prepare detailed forensic reports for legal proceedings

3. Required Technical Skills

- Knowledge of file systems (NTFS, FAT32, ext4)
- Memory forensics and volatile data analysis
- Understanding of Windows/Linux internals
- Network traffic analysis and log analysis
- Hash verification (MD5, SHA-256) for evidence integrity
- Familiarity with mobile device forensics

4. Required Soft Skills

- Meticulous documentation skills
- Objectivity and impartiality
- Ability to explain technical findings to non-technical stakeholders
- Patience and attention to detail
- Strong ethics and confidentiality

5. Tools Used

Autopsy, FTK (Forensic Toolkit), EnCase, Volatility (memory forensics), Wireshark, Cellebrite (mobile forensics), Sleuth Kit, Oxygen Forensic Detective

6. Certifications Related to the Domain

- CHFI – Computer Hacking Forensic Investigator (EC-Council)
- GCFE – GIAC Certified Forensic Examiner

- GCFA – GIAC Certified Forensic Analyst
- EnCE – EnCase Certified Examiner
- CCE – Certified Computer Examiner

7. Career Path & Growth Opportunities

Career paths include Digital Forensics Analyst, Incident Response Analyst, Cybercrime Investigator, and Forensics Consultant. Senior roles include Lead Forensic Examiner or Forensics Manager. Opportunities exist in law enforcement agencies, corporate security teams, and consulting firms.

3. SOC Analyst

1. Definition and Overview

A Security Operations Center (SOC) Analyst monitors, detects, investigates, and responds to cybersecurity threats in real time. SOC Analysts operate within a centralized team that uses various tools to protect an organization's infrastructure 24/7. They are the first line of defense against security incidents.

2. Key Responsibilities

- Monitor SIEM dashboards for security alerts and anomalies
- Triage and investigate security incidents
- Analyze logs from firewalls, IDS/IPS, endpoints, and servers
- Escalate critical incidents to Tier 2 or Tier 3 analysts
- Document incidents and maintain security tickets
- Perform threat hunting and correlation analysis

3. Required Technical Skills

- Proficiency with SIEM tools (Splunk, IBM QRadar, Microsoft Sentinel)
- Understanding of attack frameworks (MITRE ATT&CK)
- Log analysis and correlation
- Knowledge of networking fundamentals
- Endpoint Detection and Response (EDR) tools
- Basic scripting (Python, PowerShell) for automation

4. Required Soft Skills

- Ability to work under pressure and in shift-based environments
- Quick decision-making
- Team collaboration
- Clear communication for incident reporting
- Time management

5. Tools Used

Splunk, IBM QRadar, Microsoft Sentinel, CrowdStrike Falcon, Elastic SIEM, AlienVault OSSIM, TheHive, MISP

6. Certifications Related to the Domain

- CompTIA Security+
- CompTIA CySA+ (Cybersecurity Analyst)
- CEH – Certified Ethical Hacker

- GCIA – GIAC Certified Intrusion Analyst
- SC-200 – Microsoft Security Operations Analyst

7. Career Path & Growth Opportunities

SOC roles are tiered: Tier 1 (Alert Triage), Tier 2 (Incident Response), Tier 3 (Threat Hunting). Senior growth paths include SOC Lead, Incident Response Manager, and Threat Intelligence Analyst. SOC experience is highly valuable for advancing into other cybersecurity domains.

4. Malware Analysis

1. Definition and Overview

Malware Analysis is the study of malicious software to understand its origin, functionality, behavior, and impact. Analysts examine viruses, trojans, ransomware, spyware, and other malware types to develop signatures, detection rules, and mitigation strategies. The two primary approaches are static analysis (examining code without executing it) and dynamic analysis (running the malware in a controlled environment).

2. Key Responsibilities

- Analyze malware samples in isolated sandbox environments
- Reverse engineer binaries using disassemblers and decompilers
- Identify indicators of compromise (IOCs)
- Write YARA rules and detection signatures
- Document malware behavior and produce detailed analysis reports
- Support incident response teams with malware-related investigations

3. Required Technical Skills

- Assembly language and low-level programming knowledge
- Reverse engineering skills (x86/x64 architecture)
- Understanding of Windows internals and APIs
- Familiarity with packing/obfuscation techniques
- Sandboxing and virtualization
- Scripting in Python for automation of analysis tasks

4. Required Soft Skills

- Extreme patience and persistence
- Curiosity and research mindset
- Ability to document technical findings clearly
- Analytical reasoning
- Creativity in problem-solving

5. Tools Used

IDA Pro, Ghidra (NSA), x64dbg / OllyDbg, Cuckoo Sandbox, ANY.RUN, PEStudio, Process Monitor, Wireshark, VirusTotal, YARA

6. Certifications Related to the Domain

- GREM – GIAC Reverse Engineering Malware
- CRTE – Certified Red Team Expert (covers advanced techniques)

- CEH – Certified Ethical Hacker
- CHFI – Computer Hacking Forensic Investigator
- Practical Malware Analysis (self-study from the PMA book)

7. Career Path & Growth Opportunities

Malware Analysts typically start as Junior Security Analysts or SOC Analysts. Mid-level roles include Malware Researcher or Threat Researcher at cybersecurity firms like CrowdStrike, FireEye, or Kaspersky. Senior roles include Principal Malware Researcher or Reverse Engineering Lead.

5. Threat Intelligence

1. Definition and Overview

Threat Intelligence (TI) involves collecting, analyzing, and sharing information about current and potential cyber threats. It helps organizations proactively understand adversaries' tactics, techniques, and procedures (TTPs). Threat Intelligence supports strategic decision-making and enables security teams to prioritize defenses based on the most relevant threats.

2. Key Responsibilities

- Collect threat data from open-source (OSINT), commercial, and internal sources
- Analyze adversary TTPs using frameworks like MITRE ATT&CK
- Produce threat intelligence reports for executives and technical teams
- Monitor dark web forums and cybercriminal communities
- Maintain and update threat intelligence platforms (TIPs)
- Share intelligence with ISACs and other trusted communities

3. Required Technical Skills

- OSINT techniques and tools
- Understanding of MITRE ATT&CK and Cyber Kill Chain
- Data analysis and pattern recognition
- Knowledge of malware families and threat actors
- Threat intelligence platforms (MISP, ThreatConnect, Anomali)
- Scripting in Python for data collection and automation

4. Required Soft Skills

- Research and analytical skills
- Strong written communication for intelligence reports
- Ability to synthesize large amounts of data
- Situational awareness
- Cross-team collaboration

5. Tools Used

MISP (Malware Information Sharing Platform), ThreatConnect, Anomali ThreatStream, Recorded Future, Maltego, Shodan, TheHive, OpenCTI

6. Certifications Related to the Domain

- CTIA – Certified Threat Intelligence Analyst (EC-Council)
- GCTI – GIAC Cyber Threat Intelligence
- CompTIA CySA+

- CEH – Certified Ethical Hacker
- SANS FOR578 – Cyber Threat Intelligence course

7. Career Path & Growth Opportunities

Entry roles include Threat Intelligence Analyst. Mid-level includes Senior Threat Intelligence Analyst or Threat Hunter. Advanced roles include Director of Threat Intelligence, Head of Cyber Threat Operations, or working for government intelligence agencies (like FIA, CIA, MI5 equivalents).

6. Cloud Security

1. Definition and Overview

Cloud Security focuses on protecting cloud computing environments, applications, data, and infrastructure hosted on platforms like AWS, Azure, and Google Cloud. As organizations migrate to the cloud, securing these environments requires a new set of skills distinct from traditional on-premise security. Cloud Security professionals ensure confidentiality, integrity, and availability of cloud resources.

2. Key Responsibilities

- Configure and audit Identity and Access Management (IAM) policies
- Implement security controls in cloud environments (AWS/Azure/GCP)
- Monitor cloud workloads for misconfigurations and threats
- Conduct cloud penetration testing and security assessments
- Ensure compliance with cloud security frameworks (CSA CCM, CIS Benchmarks)
- Respond to cloud-based security incidents

3. Required Technical Skills

- Proficiency with AWS, Azure, or GCP security services
- Knowledge of containerization (Docker, Kubernetes) security
- Infrastructure as Code (Terraform, CloudFormation) security
- Cloud IAM, VPC, and network security groups
- CASB (Cloud Access Security Broker) tools
- DevSecOps practices

4. Required Soft Skills

- Adaptability to rapidly evolving cloud technologies
- Collaboration with DevOps and cloud engineering teams
- Strong documentation skills
- Risk assessment and management
- Continuous learning mindset

5. Tools Used

AWS Security Hub, Microsoft Defender for Cloud, Prisma Cloud (Palo Alto), CloudTrail / CloudWatch, Terraform, Checkov, Prowler, ScoutSuite

6. Certifications Related to the Domain

- AWS Certified Security – Specialty
- CCSP – Certified Cloud Security Professional (ISC^2)

- Microsoft AZ-500 – Azure Security Engineer Associate
- Google Professional Cloud Security Engineer
- CompTIA Cloud+

7. Career Path & Growth Opportunities

Cloud Security roles include Cloud Security Engineer, Cloud Security Architect, and DevSecOps Engineer. Senior roles include Cloud CISO, Principal Cloud Security Architect. Demand for cloud security professionals is among the highest in the industry due to mass cloud adoption.

7. Network Security

1. Definition and Overview

Network Security involves implementing policies, practices, and tools to prevent and monitor unauthorized access, misuse, modification, or denial of a computer network and its resources. It covers the protection of both hardware and software components of a network infrastructure, ensuring data in transit is secure and network services remain available.

2. Key Responsibilities

- Design and implement secure network architectures
- Configure and manage firewalls, IDS/IPS, and VPNs
- Monitor network traffic for anomalies and intrusions
- Perform network vulnerability assessments and audits
- Implement network segmentation and zero-trust principles
- Respond to network-level security incidents

3. Required Technical Skills

- Deep understanding of TCP/IP, OSI model, and routing protocols
- Firewall configuration (Cisco ASA, Palo Alto, FortiGate)
- Intrusion Detection/Prevention Systems (IDS/IPS)
- VPN technologies (IPSec, SSL/TLS)
- Network packet analysis
- SD-WAN and zero-trust network architecture

4. Required Soft Skills

- Problem-solving and troubleshooting
- Ability to explain complex network concepts to management
- Teamwork with IT and infrastructure teams
- Attention to detail in configuration management
- Proactive monitoring mindset

5. Tools Used

Wireshark, Cisco Firepower, Palo Alto NGFW, Snort / Suricata (IDS/IPS), Nmap, Nessus, SolarWinds, pfSense, OpenVPN

6. Certifications Related to the Domain

- CompTIA Security+
- CompTIA Network+
- CCNA Security – Cisco Certified Network Associate Security

- CCNP Security – Cisco Certified Network Professional Security
- PCNSE – Palo Alto Networks Certified Network Security Engineer

7. Career Path & Growth Opportunities

Entry roles include Network Security Analyst or Network Administrator. Mid-level includes Network Security Engineer or Firewall Engineer. Senior roles include Network Security Architect, VP of Network Infrastructure, or Security Director.

8. Application Security

1. Definition and Overview

Application Security (AppSec) focuses on finding and fixing security vulnerabilities within software applications throughout the software development lifecycle (SDLC). It involves integrating security into the development process (DevSecOps), conducting code reviews, security testing, and ensuring applications are built with security best practices to resist attacks.

2. Key Responsibilities

- Perform static (SAST) and dynamic (DAST) application security testing
- Conduct web and mobile application penetration testing
- Review source code for security flaws
- Train developers on secure coding practices
- Integrate security tools into CI/CD pipelines
- Triage and remediate vulnerabilities found in applications

3. Required Technical Skills

- Knowledge of OWASP Top 10 (web) and OWASP Mobile Top 10
- Proficiency with Burp Suite, OWASP ZAP
- Understanding of common vulnerabilities (SQLi, XSS, CSRF, SSRF, etc.)
- Secure coding practices in Python, Java, JavaScript, C#
- API security testing (REST, GraphQL, SOAP)
- CI/CD pipeline security integration

4. Required Soft Skills

- Developer empathy and collaboration
- Clear communication to explain risks to engineering teams
- Continuous learning (new attack techniques emerge constantly)
- Attention to detail in code reviews
- Ability to prioritize findings by severity

5. Tools Used

Burp Suite Pro, OWASP ZAP, SonarQube (SAST), Checkmarx, Veracode, Snyk, HCL AppScan, Postman (API testing), GitLab/GitHub Security features

6. Certifications Related to the Domain

- GWEB – GIAC Web Application Penetration Tester
- CSSLP – Certified Secure Software Lifecycle Professional (ISC^2)
- OSWE – Offensive Security Web Expert

- CompTIA PenTest+
- CEH – Certified Ethical Hacker

7. Career Path & Growth Opportunities

Entry roles include Application Security Analyst or Junior AppSec Engineer. Mid-level includes Application Security Engineer or DevSecOps Engineer. Senior roles include Principal AppSec Engineer, Application Security Architect, or Head of Product Security.

9. Governance, Risk & Compliance (GRC)

1. Definition and Overview

GRC is a structured approach to aligning IT with business objectives while managing risk and meeting compliance requirements. Governance establishes policies and frameworks; Risk Management identifies and mitigates organizational risks; Compliance ensures adherence to laws, regulations, and standards such as ISO 27001, GDPR, HIPAA, and PCI-DSS. GRC professionals bridge the gap between business leadership and technical security teams.

2. Key Responsibilities

- Develop and maintain information security policies and procedures
- Conduct risk assessments and create risk registers
- Ensure compliance with relevant regulations and standards
- Manage internal and external security audits
- Develop Business Continuity and Disaster Recovery plans
- Report on security posture to executive leadership

3. Required Technical Skills

- Knowledge of frameworks: ISO 27001, NIST CSF, SOC 2, PCI-DSS, GDPR
- Risk assessment methodologies (FAIR, OCTAVE)
- GRC platform proficiency (Archer, ServiceNow GRC)
- Understanding of security controls and their implementation
- Business Impact Analysis (BIA)
- Policy writing and documentation

4. Required Soft Skills

- Strong written and verbal communication
- Negotiation and influencing skills
- Business acumen and understanding of organizational goals
- Project management
- Stakeholder management at all levels

5. Tools Used

RSA Archer, ServiceNow GRC, MetricStream, LogicGate, OneTrust, Qualys VMDR, Vanta, Drata

6. Certifications Related to the Domain

- CISM – Certified Information Security Manager (ISACA)
- CISA – Certified Information Systems Auditor (ISACA)
- CRISC – Certified in Risk and Information Systems Control (ISACA)

- CISSP – Certified Information Systems Security Professional (ISC^2)
- ISO/IEC 27001 Lead Auditor / Implementer

7. Career Path & Growth Opportunities

Entry roles include GRC Analyst or IT Auditor. Mid-level includes Risk Manager or Compliance Manager. Senior roles include GRC Director, Chief Risk Officer (CRO), or Chief Information Security Officer (CISO). GRC professionals are highly valued in banking, healthcare, and government sectors.

10. Red Team / Blue Team Operations

1. Definition and Overview

Red Team Operations simulate real-world adversarial attacks to test an organization's defenses. The Red Team acts as attackers, while the Blue Team defends and responds. A Purple Team approach combines both for collaborative security improvement. These exercises expose gaps between assumed and actual security posture and build organizational resilience.

2. Key Responsibilities

- Red Team: Plan and execute full-scope adversarial simulations (physical, social engineering, cyber)
- Red Team: Develop custom exploits, tooling, and attack scenarios
- Blue Team: Detect, contain, and eradicate threats during exercises
- Blue Team: Improve detection rules, playbooks, and incident response processes
- Both: Conduct debrief sessions and provide recommendations
- Purple Team: Facilitate collaborative exercises between Red and Blue teams

3. Required Technical Skills

- Red Team: Advanced exploitation, lateral movement, and C2 frameworks
- Red Team: Custom malware development and evasion techniques
- Blue Team: SIEM tuning, detection engineering, threat hunting
- Blue Team: Digital forensics and incident response (DFIR)
- Both: Understanding of MITRE ATT&CK and D3FEND frameworks
- Both: Scripting and automation capabilities

4. Required Soft Skills

- Adversarial and creative thinking (Red Team)
- Calm under pressure and systematic response (Blue Team)
- Strong teamwork and communication
- Ethical responsibility and confidentiality
- Continuous learning from each engagement

5. Tools Used

Red Team: Cobalt Strike, Havoc C2, Metasploit, Mimikatz, BloodHound, Blue Team: Splunk, Elastic SIEM, CrowdStrike, Velociraptor, YARA, Both: MITRE ATT&CK Navigator, Atomic Red Team

6. Certifications Related to the Domain

- CRTO – Certified Red Team Operator (Zero-Point Security)
- CRTE – Certified Red Team Expert

- OSCP – Offensive Security Certified Professional
- GCIH – GIAC Certified Incident Handler (Blue Team)
- GCIA – GIAC Certified Intrusion Analyst

7. Career Path & Growth Opportunities

Red Team paths include Red Team Operator, Adversary Simulation Specialist, and Red Team Lead. Blue Team paths include SOC Analyst, Incident Response Analyst, and Detection Engineer. Combined experience opens doors to Purple Team Lead, Security Engineering Manager, and Director of Security Operations.
